

## Food chain fill in the blanks

Think you know a thing or two about the Keji Community? Use the words below to fill in the blanks.

plants  
energy  
consumers  
omnivores

producers  
decomposers  
herbivores  
food web

sun  
carnivores

All residents of the Keji community must eat in order to survive.  
\_\_\_\_\_ passes from link to link as it travels through the food chain.

All energy comes from the \_\_\_\_\_. \_\_\_\_\_ are able to capture sunlight energy and make their own food. They are called \_\_\_\_\_. The red oak is an example of this.

\_\_\_\_\_ are the next level in the food chain. Animals that feed only on plants are called \_\_\_\_\_. The white-tailed deer belongs in this category.

Animals that only eat other animals are called \_\_\_\_\_. Barred owls like Mayor Hoot are an example of this.

Some animals eat both plant and animal matter. For example, red foxes like Sly Fox are \_\_\_\_\_ because they eat acorns as well as squirrels.

\_\_\_\_\_ are the final level in the food chain. They eat decaying organic matter. Mushrooms belong in this group.

All of the food chains in Keji combine to form a \_\_\_\_\_. It is important to keep the community healthy so that these connections don't break down.
